

ALGE COMMUNICATIONS

Arguably the single most important component of your timing system!
Now available in two convenient styles.

OVERVIEW

The Alge Q34 & HS-1D headsets are specifically designed to work with your Alge timing system, or stand-alone as an independent hardwired communications system. These high quality headsets are ultra comfortable and unlike many other models are wearable all day long without giving you ear aches!

DESCRIPTION

- Both headset models require either the SV3 or SV4 speech amplifier (sold separately), or will plug in directly to your Alge timer (on all models equipped with a communications circuit)
- Available in normal cable lengths or with extra-long starter's cable
- New high-density foam earpieces do not absorb water when used in rain or bad weather
- Q34 is recommended for outdoor use due to it's high sound attenuating capability
- HS-1D recommended for desktop use where one unobstructed ear is beneficial to hear what's going on around you
- No volume controls on either model (volume is available on the speech amplifier or timer)

ACCESSORIES & ADD-ONS

Both headsets are compatible with the following products sold by PST:

MODELS AVAILABLE

Available as Q34 dual-earpiece model, or HS-1D single-earpiece model.

COMPATIBILITY STATEMENT

This product family is fully compatible with all existing **Alge & PST** products.
